

How are your Honda Wipers?

Three common issues for worn-out wiper blades are streaking, chattering, and split rubber.

Streaking – Dry rubber is usually the main problem, however, substances like tree sap, insects, or road grime may impair your visibility and may cause windshield damage.

Chattering – If your vehicle has been parked for a period of time, the chances that your wipers molded to the curvature of your car's windshield is high. This curvature will force erratic contact with the rest of the windshield's surface as it wipes, causing some chatter.

Split Rubber – Age and use of your wipers will cause the rubber to naturally wear down and split over time. Split rubber may also be caused from exposure to the sun's ultraviolet rays. Deteriorated rubber blades will not provide a safe view in wet weather driving.

If your wiper blades are experiencing one or multiple issues, then it is time to replace them. Klein Honda wants you to maintain your safety when driving, especially in rainy climates like Seattle, WA. When the time is ready, Klein Honda only recommends using Honda Genuine Wiper Blades. We want your Honda to maintain its original safety system. The four major reasons for using Honda Genuine Wiper Blades are exact size, exact fit, exacting standards, and integrated design.

Exact size – Honda Genuine Wiper Blades are the precise length for optimal blade performance. Other brands, designed to accommodate a variety of cars, might be longer or shorter, which could affect wiper performance and visibility.

Exact fit – Honda Genuine Wiper Blades lock easily and securely into your Honda's wiper arm. Other blades might require the use of an adapter that could possibly result in a compromised fit.

Exacting standards – Every Honda Genuine Wiper Blade must meet Honda's strict original specifications. They're made using the highest quality, most durable rubber compounds and frame materials.

Integrated design – Honda Genuine Wiper Blades are an integral part of your vehicle. Because they were part of your Honda's design, from blueprint to wind tunnel, they're built to the specific curvature of your windshield, and engineered to minimize wind noise and lift at highway speeds.

If you need to order wiper blades, please call Klein Honda's parts department! Klein Honda has special pricing available on all Honda wiper blades. Be safe and replace today!
